

## **Soil Testing Labs**

Updated April 11, 2025

Anthony Bly

SDSU Extension Soils Field Specialist

Crop Producers, agronomists, gardeners, homeowners and anyone who is thinking about taking soil samples should locate a soil testing lab prior to sampling. Below is a list of nearby state and private laboratories that can be used for crop production fields, gardens and lawns. The private laboratories are not necessarily recommended or endorsed; however, many will give university recommendations when asked. Crop producers, agronomists, gardeners and homeowners with questions on sample submissions, analysis charges and recommendations should contact the laboratory of interest.
